

## ABSTRACT

[0028] A video entertainment satellite network system includes a plurality of individual video entertainment satellite systems that communicate with each other through the video entertainment satellite network system. The video entertainment satellite network system will allow a user of the system to play, record, and interact in selection of video music, perform Karaoke, record live events, and distribute real-time signals to other video entertainment satellite systems in the video entertainment satellite network system by two-way satellite and internet communication.
